MATHEY DEARMAN –
PIPE CUTTING & BEVELING MACHINES

Short Saddle Machine – 1SA

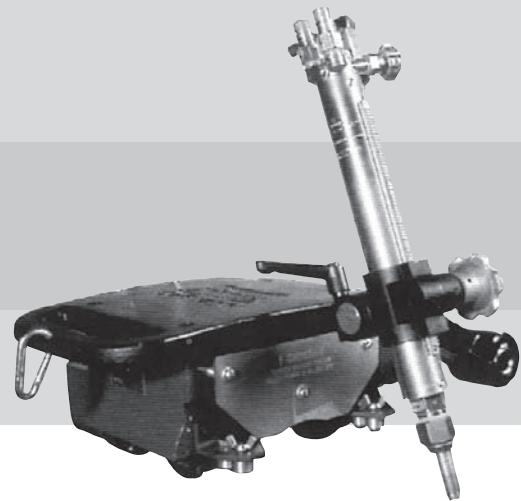

Experienced and inexperienced welders can improve their productivity, accuracy and cut quality with the Mathey Dearman Short Saddle Cutting and Beveling Machine. The integrity of design and the quality of the components enable the machines to produce the most consistently square and accurate cuts year after year. Available in manual or motorized models to cut pipe for 1.5" – 48" (38mm – 1219mm).

MATHEY DEARMAN –
PIPE CUTTING & BEVELING MACHINES

MagnaCut

Introducing the world's most innovative motorized, permanently magnetic pipe and plate cutting machine with a remote-controlled torch arm for pinpoint torch adjustments! Moves around pipe or across plate up to 32" (813mm) per minute! The MagnaCut Motor Control Box features a remote-controlled Torch Arm Adjustment, speed and directional control!

MATHEY DEARMAN –
CHAIN CUTTING & BEVELING MACHINES

Maxi Jolly Chain Machine

The Maxi Jolly Chain Machine can overcome a variety of obstacles when cutting pipe or tubing. A bad out of round condition is no match for the Maxi, which has three wheel positions, and a spring-loaded out of round compensating device on the torch arm. The cam handle allows accurate chain tension adjustments to either side of the machines. The most durable and accurate of the Jolly Chain Machines, the Maxi, is recommended for cutting large diameter pipe.

Specify one of the following:

- a) 1-3/8" (35mm) Torch Holder for a torch with 32 Pitch torch rack.
- b) 1-3/8" (35mm) Torch Holder for a torch with Metric Pitch torch rack.
- c) Torch having a barrel diameter 1-3/16" (30mm).

Torch is not included.

- Spring loaded out of round compensating device on the torch arm is standard equipment.
- Bearings at all rotating point.
- Triple width drive chain for improved traction and tracking.
- Twin lever handles for applying quick chain tension and release from the pipe.
- Precision chain tension adjustments can be made to either side of the drive chain for improved tracking.
- Three wheel positioning for enhanced wheel-tracking performance.
- Plated knurled wheels for more cutting accuracy.
- A second torch can be added quickly and easily, as it is only a matter of adding a sliding support and torch holder to the torch arm.
- Guide Strips are recommended when working with pipes that are 18" (457mm) and larger or when fast setup is required.
- Will cut vertical pipe 18" (457mm) and larger if used with Guide Strips.
- Easily converted to motorized operation.
- Easily adapted for operation with 9'-14' (274cm or 427cm) Flexible Drive Cable Kit.
- Motorized unit has maximum speed of 48" (1219mm) per minute and minimum speed of 7" (179mm) per minute.
- Comes with enough chain to cut 3"-16" (76-406mm) pipe.
