

# Jack-Mate Lifting Systems

**PRECISE AND  
RELIABLE  
SYNCHRONIZED  
LIFTING**

**The Jack-Mate Lifting System synchronizes hydraulic cylinders for multi-point lifting and positioning applications.**

At Equipment Corps, we carry both volumetric and split flow systems in our inventory. Equal volume on dedicated circuits ensure synchronized travel. It's easy to setup and onsite support is provided by well-qualified, field tested technicians. Real time pressure and displacement data are wirelessly transmitted to a user-friendly interface. The interconnection between digital and mechanical feedback offer operators and engineers a high level of insight into the behaviour of the structure being lifted and the ability to adjust to everchanging conditions. This technology is designed and manufactured in Canada and is MTO OPSS compliant. Its rugged mechanical design is built for real jobsites where, as you know, environments are harsh.

**- Available Synchronous Lifting Systems -**

**SPLIT FLOW SYSTEMS**  
**4 AND 14 PORT**  
 (for Double-acting Cylinders)

**VOLUMETRIC SYSTEMS**  
**8, 10 AND 12 PORT**  
 (for Single- and Double-acting Cylinders)

Call us to learn more about our large inventory of jacks and cylinders. They range from low-profile compact designs to cylinders with lock-nuts for extended mechanical load holding. Each are tailored for unique job specifications.
